A CAPABLE RESEARCH PLATFORM

A

FLEXIBLE PLATFORM

Although primarily designed for agriculture, the AutoAgri IC-Series has a combination of properties making it unique as a research and development platform.

Primary navigation by GPS with RTK. Integrated cameras In front and rear. Separate wide-angle camera for tool monitoring. Remote control for manual driving and setup of the vehicle.

CAN, analog and digital I/O enables users to implement their own tools, sensors or other hardware.

AutoAgri develops their own software, for research use we can offer adaptations to customer specific needs

OFFROAD CAPABLE

4-wheel drive and 360 degree 4-wheel steering in combination with large wheels and high ground clearance. Together with different driving modes, this makes the IC-Series very capable under difficult conditions.

EASY TRANSPORTATION

2000 kg payload, autonomous and electric. Still transportable behind your SUV or Pick-up truck between work sites!
